

Student Management System (SMS)

Rushmore Business School uses the Student Management System (SMS) as a database to keep records of student systematically. The system enables the institution to store and organise student-related data in a proper and centralizes manner so that we can easily access, edit or update data if needed.

The SMS deals with all information related to students, such as, student details, enrolment and end date, payment and results. It also helps in reaching all the student data easily and effectively. student's details are kept confidential and is only accessible to the Director, Head of student Support services and relevant course-coordinators.

The Student Management System takes care of the admission process as well. The complete management system accesses the registration process, admission approval, document uploading and generate offer letter, invoice and payment plan.

The school database system helps in providing effective digital tracking of student data. All the documentation like admission forms, student records, payment, paperwork, and all other data can be managed effectively. It also provides proper security of all the records managing and securing the data for future reference to access whenever they are required which is quite complex with paperwork.

The school database system stores each data properly providing real-time tracking of all the documents with just a few clicks.

The student details are input manually which include student name, age, gender, National Identity Card number, phone numbers, address, next of keen's details, disabilities, qualifications and career history. After inputting all these details, we shall move to the application process.

The application process includes student name, course applied, referee, start and end date. In addition, course fee is automatically detected. The offer letter and invoice are then generated automatically with a payment plan.

Upon completion of a programme, we shall upload the certificate and transcript of the student on the system.

The SMS is the most secured and reliable source, it provides a hundred times more security than manually stored information. Student database software helps in storing all the information using a cloud-based server. It also provides multiple automatic backups of essential data to make sure we do not lose our valuable data. Most importantly, it prevents software from getting hacked by any competitor or other cyber suspect.
