

MASTER IN PROJECT MANAGEMENT

APPROVAL IN PROCESS

The MS Project Management Course is devised to address the expanding complexity of projects and features key tools and techniques. Prospective candidates will gain an understanding of the core competencies required to drive a successful conclusion, as well as an appreciation of using a more holistic, international, and ethical stakeholder project management approach.

Project management is relevant to every department in an organisation, and there is increasing demand for experts to manage projects efficiently. This course explores project management through a series of progressive modules, developing your knowledge from the fundamentals, through to modules addressing risk, resilience, and contingency planning. Candidates will also explore key issues faced by project managers such as project finance and procurement, managing project teams, critical perspectives and social impact and responsibility. The knowledge, understanding and skills gained during the course can be applied to a range of environments. It brings together resources, skills, technology, and ideas, to realise benefits or achieve objectives, and operates within the multiple project constraints of cost, scope, time and quality requirements. Candidates will become familiar with leading thinking and emerging research in the field of project management to benefit their continued professional development.

Course Aims

This course is aimed at professionals or graduates wishing to pursue a career as a project manager in various industries. It is suitable for those already working in broad roles in industries who aspire to reach senior management positions. Additionally, this course is suitable for students in related subject areas looking to progress to a managerial or technical postgraduate programme.

Learning Outcomes

By studying this course, candidates will:

1. Demonstrate a systematic understanding of the relevant business functions in the context of project management. For example: finance, risk, sustainability, operations, and quality control.
2. Gain an in-depth understanding of tools, concepts and theories relating to the chosen area of project management at an advanced level.
3. Develop the ability to critically analyse contrasting project management frameworks, methods, and systems in relation to organisational culture, environmental factors.
4. Apply a range of project management frameworks to evaluate and solve complex project delivery problems and make informed decisions in challenging situations.
5. Enhance skillset with modules specialising in either construction or sustainability.
