

## **BSc (Hons) CONSTRUCTION MANAGEMENT**

(Advanced entry into final year)

There is a growing need for people having expertise across construction and management. In this degree course, you'll develop the skills you need to manage innovative projects and teams that contribute to the built environment and to best practice in the construction industry. Candidates will study a number of business and management modules to equip them to manage a range of construction projects. These include Commercial Management, Law and Procurement, and Management of People.

The BSc (Hons) Construction Management explores how different parts of the construction process fit together, and how you can manage that process to deliver the best results for society and the environment. Build your leadership potential in the construction industry with management skills that encompass the full process of construction, from financial planning and technical possibilities to safety on site, personnel management and sustainability of structures.

### **Learning Outcomes**

Upon successful completion of this course, graduates will be able to:

1. Apply complex project and construction management techniques to effectively oversee large-scale construction projects, ensuring they meet scheduled deadlines, budget constraints, and quality standards.
2. Apply advanced analytical and problem-solving skills to anticipate and address challenges in construction projects, using sophisticated data analysis and simulation tools.
3. Evaluate sustainable construction practices, including the implementation of green building technologies and environmentally responsible management strategies.
4. Demonstrate leadership and ethical decision-making in managing diverse teams and stakeholders, fostering an inclusive work environment, and ensuring compliance with all regulatory and legal standards.
5. Develop a deep understanding of legal aspects, risk management, and strategic financial planning to negotiate and manage complex construction contracts.
6. Research and apply up to date technologies and methodologies to innovate within the field of construction management, thereby advancing the industry and contributing to its evolution.
